

You are part of a committee that has been tasked with selecting the new Dean of Harvard College. The list has been narrowed to two candidates: Paul Peterson and Maxwell Palmer. As a representative of the undergraduate community, you need to determine the preferences of your peers before you can make your choice.

Spend 15 minutes discussing with your group how you would approach this task. Depending on your approach, you may want to think about how to account for some of the following issues:

- Sampling scheme
- Polling Method
- An Uninformed Populace
- Sampling Error
- Selection Bias
- Measurement Error

Develop a short, 3 minute presentation where you describe your approach.
